

All local area high school students (grades 9-12) studying Science, Technology, Engineering or Math (STEM) are invited to be part of the Engineering Explorer Programs at Lockheed Martin Rotary & Mission Systems (RMS) in Owego, NY. The goal of this coed program is to provide a better understanding of career opportunities in engineering, science and business through hands-on projects, facility tours, guest speakers and discussions.

The upcoming project for 2016-2017 will be to design and build a quadcopter-based payload delivery system. Students will experience the engineering design process from the ground up, including brainstorming, documenting, prototyping and constructing a design of their choice that will bring together multiple engineering disciplines. Each quadcopter system will compete in a series of challenges to determine the best design!

The group will meet on the **Second and Fourth Tuesdays** of each month through the end of May. Adult advisors will be present at each meeting to assist students with projects and to guide discussions. There is a registration fee of \$25, payable online or by mail and due by the first meeting. Spaces are limited and are available on a first-come, first-served basis.

An organizational meeting for interested students, friends and parents will be held on **Tuesday, October 25, from 6:00 p.m. to 8:00 p.m. at the LM RMS Owego facility, Main Lobby**. This meeting will provide an overview of the program, including the Lockheed Martin staff and resources that support the program. Students will also have the chance to ask questions and share topics of interest.

All attendees must pre-register for this meeting (including LM employees). To register and receive facility access information, go to:

www.TiogaExplorers.com

and follow the link to register.
